Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 12-14 and 16-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Suganuma et al. (5,694,425).

As to claim 12, suganuma teaches a method for converting a given first code of an audio signal into a second code string and transmit the output, comprising the steps of:

Generating a decoded signal from the first input code string;
demultiplexing header information from an incoming signals and determining its character;

Audio decoding means for decoding an audio signal;
a pseudo PCM signal generating means ;

Mode switch means for encoding the audio signal according to the determination where the audio decoder decides if the codes represent non speech signals or audio signals from the code string (payload) (Fig.1-3; Col.5, lines 40-56; Col.7, lines 9-12; Col.7, line 12-Col.8, line 8; Col.15, lines 45-65).

As to claim 13, Suganuma teaches where the judging is made from the digital audio signal of the given code which indicates the non speech information and where the encoded strings are different (Col.7, lines 9-15; Fig.3).

as to claim 14 it is inherent in Sugnuma teaching that the input encoded string at the decoder from the transmission line for the non speech and the speech is same.

As to claims 16-19, Sukanuma teaches where the input to the decoder includes non-speech signal that inherently includes tones as well as other noises (Col.5, lines 40-56; Col.7, lines 9-12)

Allowable Subject Matter

Claims 1-10 and 20-22 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: the claims are allowed because the prior arts of record do not teach where the system includes the non audio decoding and the audio decoding circuit as recited in the claims.
